InCopy 2026 screen symbols typesetting terminology

LINE BREAKS

Forced Line Break: Also called a soft return, it forces a line to break, starting a new line without starting a new paragraph.

Discretionary Line Break: Indicates where a line of text should break if the line needs to break.

TEXT FLOW BREAKS

Paragraph Break (Return): Inserts a paragraph return (the same as pressing Enter or Return).

Column Break: Flows text to the next column in the current text frame. If the frame has only one column, the text goes to the next threaded frame.

Frame Break: Flows text to the next threaded text frame, regardless of the current text frame's column setup.

Page Break: Flows text to the next page with a text frame threaded to the current text frame.

Odd Page Break: Flows text to the next odd-numbered page with a text frame threaded to the current text frame.

Even Page Break: Flows text to the next even-numbered page with a text frame threaded to the current text frame.

OTHER SPECIAL

Tab: Tabs position text at specific horizontal locations in a line of text in a text frame.

Right Indent Tab: A special character that aligns all subsequent text to the right edge of the text frame. It is in the context menu; not in the Tabs dialog box.

Indent to Here: A character to indent lines in a paragraph independently of a paragraph's left indent value. Indent To Here is part of the text flow, as a visible character. If text reflows, the indent moves with it.

End Nested Style Here: Extends the nested style up to the appearance of the End Nested Style character you insert.

Non-Joiner (prevents ligature): A zero-width, character that tells two characters not to join, such as a ligature.

End of Story Marker: This non-selectable screen symbol indicates the end of a story. It automatically follows the last character in a flow of text.

WHITE SPACES

Spacebar Space: A variable width space made with the spacebar key. Values are from 1/5 to 1/4 (usually) to 1/3 em.

Em Space (relative to pt size): The em space (or quad, quadrat) or mutton, is as wide as the point size.

En Space (1/2 em): The en space (or quad) or nut, is half an em space. In typesetting, it is used as a space after the bullet.

Third Space: The third space, or thick, or three-per-em space, is one third of the width of an em space.

Quarter Space: The quarter space, or mid, or four-per-em space, is one fourth of the width of an em.

Sixth Space: The sixth space, or six-per-em space, is one-sixth of the width of an em.

Thin Space (1/8 em): This space is one-eighth of the width of an em, and is often used on either side of an em or en dash.

Hair Space (1/24 em): This space is one-twenty-fourth of the width of an em, and is used for fine spacing adjustments.

Nonbreaking Space: Joins the characters before and after the space together; not allowing a break.

Nonbreaking Space (fixed width):

Punctuation Space: A space the same width as the narrow punctuation marks in a font, like the period or the comma.

Figure Space: A space the same width as a tabular figure in a font. Tabular figures (numbers) all have the same width.

Flush Space: Adds a variable amount of space to the last line of a fully justified paragraph. It is also used to distribute equal amounts of space between characters in fully-justified text.

Ideographic Space: A separator space as wide as a CJK cell.

HYPHENS

Auto Hyphen: InDesign inserts an automatic hyphen on its own, when a word needs to break at the end of a line.

Discretionary Hyphen: This only hyphenates when needed; otherwise it does not show. It can be inserted in front of a word, causing the word not to break, or within a word.

Non-breaking Hyphen: Special character that prevents a line break to keep strings and/or words together on a line.

MARKERS

Anchored Object: An icon marker showing that another frame is attached into the text flow.

Conditional Text: Text that appears according to a particular version of the file chosen in the Conditional Text panel.

Cross-Reference Source and Destination: Hyperlink markers in text to which a hyperlink jumps to another location in text.

Endnote: An endnote consists of two linked parts: the endnote reference number that appears in source text, and the endnote text that appears at the end of the document.

Footnote: A footnote consists of two linked parts: the footnote reference number that appears in text, and the footnote text that appears at the bottom of the column.

Split Footnote: Select this option if you want footnotes to break across a column when the footnote exceeds the amount of space available for it in that column.

Hyperlink: A marker link to jump to other locations in the same document, to other documents, or to website addresses.

Index Marker: Placed in front of words you wish to treat as a collection of topics that later are generated into an Index.

Inline or InCopy Note: Text embedded within story text visible with in InDesign's Story Editor mode or InCopy's Story, Galley, or Layout view.

Paragraph Break Marker: A visible icon in Story Editor mode with the same meaning as a hard return.

Position Marker: In InCopy, acting like a bookmark, a marker at a specific location in the text so that you can easily return to it using a command or shortcut.

Text Anchor: An icon marking the location of a hyperlink destination, and is usually built in the hyperlinks panel.

Text Variable: A text variable marks an item you insert in your document that varies according to the context.

XML Tagged Text: Markers that show content has been tagged for repurpose. XML tags don't carry info about how data is supposed to look; but are for identifying content.
